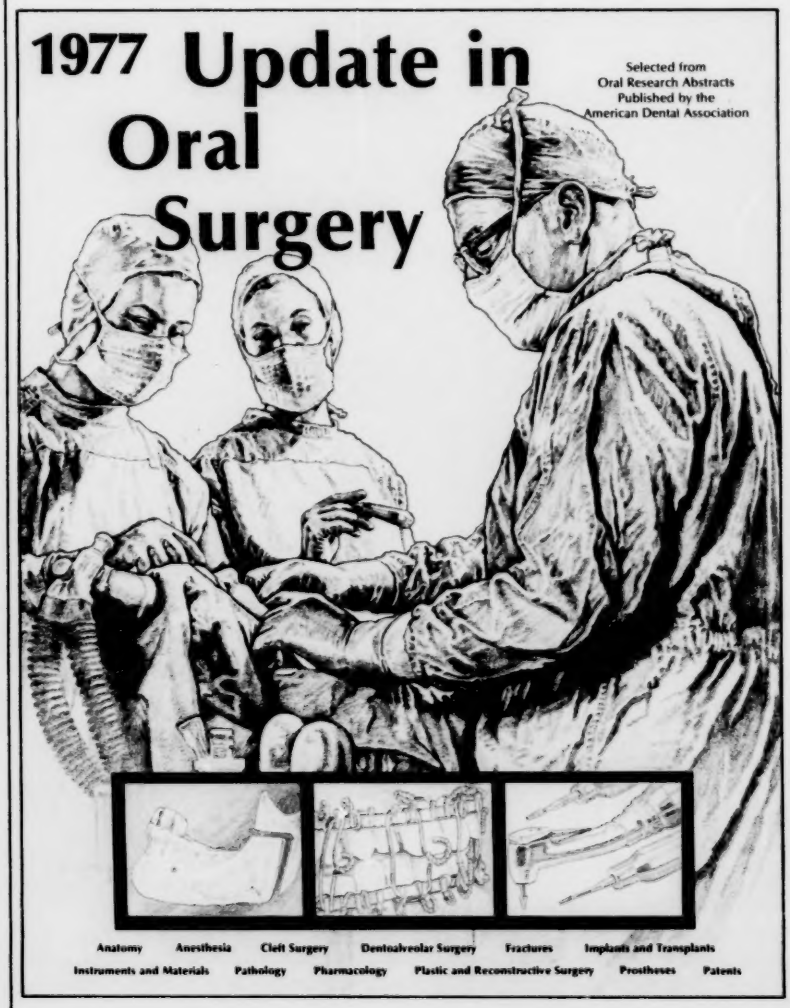
Update in Oral Surgery

When your patients need oral surgical care...



Update in Oral Surgery can provide information for your practice... whether you are a specialist or a general practitioner. This book in the **Update** series is a valuable collection of more than 750 abstracts of recent reports written on the subject. It is a comprehensive collection of information from the many dental and other scientific journals that you would otherwise not have time to read. **Update in Oral Surgery** is an excellent means for keeping up to date in this important specialty. Reading **Update in Oral Surgery** will help you to evaluate your patients' needs and to determine appropriate treatment.

Update in Oral Surgery is illustrated with photographs, line drawings, graphs and charts. The abstracts describe results of research and clinical studies done here and abroad. Each abstract reports the most important information from the original article, together with a complete bibliographic citation. And, usually, the author's address is also included for easy correspondence. Abstracts are classified in clinical subjects (cleft and dentoalveolar surgery, plastic and reconstructive surgery, implants and transplants) and in basic sciences (anatomy, pathology, pharmacology), among others.

You simply don't have time to read and evaluate all of the world's many articles related to oral surgery. So we've done the job for you. We've created **Update in Oral Surgery.** Order your copy now by completing the attached order blank and sending it, together with a check for $10 (tax deductible as a business expense) to the Association's order section.
